PRODUCT OF GENERAL MOTORS OF CANADA, LIMITED

M. D. Cereal

The Council of the Municipal District of Cereal No. 243, met in the municipal office at Oyen, Alberta on Saturday, June 8, at 10 o'clock a.m.

All the councillors present. The minutes of the council meeting of May 11 and the financial statements for the month of May were read and accepted.

The reserve prices were set on the various parcels of land to be offered for sale under the Tax Recovery Act 1922.

Correspondence presented to council and dealt with.

Several parcels of land were exempted from the wild lands tax.

The Secretary was instructed in regard to the account of Mrs. Peterson with the Calgary General Hospital.

Dr. Esler was appointed Medical Health Officer for the west half and Dr. McGregor for the east half of the Municipal District.

The council agreed to sell the S.W. 32 26 5-4, to E. L. Ketcheson on a lease agreement.

The following roadwork accounts were passed: C. Schillito, 10.40; A. V. E. Chalkline, 33.37; N. Schaffer, 9.00; C. A. Magnuson, 70.00; M. Perrier, 70.00; F. Sauve, 3.00; R. W. Nichol, 3.25; J. Williams, 25.20; J. Regehr, 25.25; J. Bergh, 52.50; A. Duffield, 3.00; A. Duffield, 10.00; C. A. Magnuson, 40.00; S. A. Duffield, 5.40; P. E. Thayer, 165.40; O. Braman, 34.05; H. Braman, 9.00; Geo. Watson, 60.30; V. Seymour, 34.05; H. W. B. Byler, 31.00; J. Black, 20.50; J. Lester, 8.50.

The following general accounts were passed for payment: J. E. Horaback, salary for May, 150.00; J. P. Horaback, for assessment, appraisal of land, expenses at Cereal etc., 48.90; A. H. Melville, repairs for Division 4, 1.35; Western Municipal News, assessment roll, 10.20; Recorder, sale of lands, 9.85.

(Continued on Supplement)

Sugar Beet Crop is Promising

Reports from the southern part of the province indicate very satisfactory prospects from the best growing areas. It is estimated that some 9,000 acres have been seeded to this crop, the largest acreage in the history of the province. Seed germinated uniformly, and in a number of early sown fields thinning has been started. New loading platform to handle the shipments of beets to the factory at Raymond will be constructed at Iron Springs, Picture Butte and Regal.

First Trans-Atlantic Flight

The first Trans-Atlantic flight was successfully accomplished by two British aviators, Capt. John Alcock, D.S.C., pilot, and Lieutenant Arthur Whitten Brown, navigator, the machine used was a Vickers Viny Rolle Royce twin engine.

It was a marvellous flight and greater glory attaches to it because it was made under bad weather conditions; indeed fog so obscured vision at times that the machine appeared to be flying upside down and once only fifty feet from the water.

The project of the Atlantic flight was originated by the late Viscount Northcliffe in the London Daily Mail in April, 1913, and suspended during the war.

Captain Alcock and Lieutenant Brown left St. John's Newfoundland at 5.13 p.m. Saturday, June 14, 1919, and landed

(Concluded on page 2.)

Bindloss Sports Attracts Large Crowd

The world and his wife were at the Bindloss sports last Friday. The crowd was probably the largest ever to congregate the lively river town, two passenger carrying aeroplanes were kept busy till dusk giving people the air. The colored ball team lived up to expectations, showing both ability and speed. Oyen went down to them 8-1, and Sceptre had to be content with 8 out of 15 runs. Oyen's performance in the evening game against Sceptre was rather disappointing, the local boys losing by a score of 4-1, errors committed in the game proving costly.

Pupils Will Give Recital

A pianoforte recital by the pupils of Mr. George Benbow, will be given in Oyen Theatre on Thursday, June 27. The programme will start at 8.15 p.m. Children under twelve unaccompanied by parents or adults, will not be admitted.

Fire Brigade Re-organized

The fire brigade has been re-organized and the following appointments made by the Village Council.

Fire Chief—James Lees.
Assistant chiefs—The Village Council.
Engineers—C. S. Wright, A. J. Funnell, John Gaul and A. S. Johnson.
Mozzlemen—C. L. Dunford, Angus Blue, Alf. Gibson J. R. Acheson and C. P. Snyder.
Note: \$5.00 will be paid to the person taking the first tank of water to fire, and \$3.00 for the second tank.

Science To Rescue Agriculture

Recent developments in the realm of agriculture indicate that science is hastening to the aid of the farmer in Western Canada and that the time is not far distant when only those farmers who make an earnest study of their problems and apply to those problems the discoveries which are being made by technical experts can hope to forge ahead and secure for themselves and their families the comforts which result to the successful business man.

There are several major problems confronting the man upon the land in the West at the present time. Among these are the questions of reducing the cost of the farm implement, companies, individual farmers or of not fighting, but of forestalling reduction in yields through the agency of weeds, insect pests and diseases.

High costs of production and reduced yields through weeds, insects and diseases form a combination which can only be beaten by the alert farmer. Only the farmer who calls to his aid the forces of science can hope to overcome this profit-robbing alliance.

Consider, for instance, the cost of producing a bushel of wheat. While accurate figures are difficult to secure it is definitely known that some farmers are able to place a bushel of wheat in their granary or in the elevator at a mere fraction of the figure which it has cost some of their neighbors to raise and harvest a similar bushel of wheat. It is a safe prediction that the cheap-production farmer has carefully studied the economic effects of the use of good seed, scientifically sound cultivation methods and the cheapest and best means of fighting his crop. Not only has he done this, but he has kept good record of the cost of his various operations, thus enabling him to find out the weak spots and remedy them.

In this field of agricultural effort a great deal of pioneering work has been done by the farm implement companies, individual farmers or of not fighting, but of forestalling reduction in yields through the agency of weeds, insect pests and diseases.

Then there is the problem of reducing the loss to profits through the prevalence of weeds which are annually taking a huge toll from farmers. Here, again, a good deal of research work has been carried on by experts in the employ of the Colleges of Agriculture, the Provincial Governments and the Federal Department of Agriculture. It has been demonstrated beyond all doubt that methods can be adopted which will keep these pests within control in some case, and in others that they can be entirely eradicated.

As an illustration of what is being done, investigations conducted by the Saskatchewan Department of Agriculture last year, as to the possibilities of eradicating some of the most serious weeds by the use of chemicals, has cited. It is true that the tests showed that the cost of chemicals as a weed destruction agency on a large scale, may be uneconomical but the value of such chemicals in eradicating small plots and preventing them from infesting the farm was clearly proved. A combination of chemicals, suitable cultivation methods, the use of clean and pure seed, will go a long way towards reducing the losses occasioned by weeds in this province.

Similar research work has been, and is being, carried on in the fight against diseases attacking wheat and other cereal grain crops. It is only necessary to refer to one of them—the efforts which are being made to breed a wheat that is not only resistant to the ravages of rust but that also contains those milling and baking attributes which makes Canadian hard spring wheat so desirable in the export market. Recent reports indicate that success in this field of endeavor is crowning the efforts of technical workers, and it is probably only a matter of two or three years before the farmers will be able to seed their fields with a rust-resistant wheat of good milling and baking quality.

The foregoing are only one of two illustrations of the manner in which science is being called to aid the farmer and to be successful in this day and generation. It is essential that the agriculturist inform himself of what is being done on his behalf and apply the results of the work of those trained men to his own particular problems.

Imperial Airways Plan Luxurious Liners

Change In Construction Places Body Beneath Both Wings

Progress of commercial flying is shown in the order placed by Imperial Airways for a fleet of luxurious air liners, giant craft. Accommodations specified is for 40 passengers in two saloons eight feet high within the enormous fuselage. The seats will be arranged four abreast, with a gangway running the middle, and a private cabin, similar to those on Pullman cars, will be arranged for parties of two or four in addition. There will be a bar where refreshments can be served on route. Four engines, two on each wing, on either side of the fuselage, will drive the main propeller through the air, and three engines can, if necessary, alone be used. Safety slots will be fitted. One of the big changes in construction is that the body of the craft is slung beneath both wings, instead of between them. This helps to prevent stalls in the cabin and also gives the passengers a clear view.

All-Canadian Highway

Will Go Through Most Spectacular Scenery In World

Before the year is over it may be possible for one to drive from Winnipeg to Vancouver on all weather highways without detours to the United States pavements. Gravelled roads already exist from Calgary to Golden, B.C., and the British Columbia and federal governments are now building around the "big bend" of the Columbia river to join the existing road down the Fraser Canyon to Vancouver. This highway when complete from Winnipeg to Pacific tide water will go through some of the most interesting country in the most spectacular scenery in the world.

It will then be possible to bridge or tunnel Lake Superior.

Authorize Court Action

Persons charged under the Criminal Code in Yukon territory with an indictable offence may at the discretion of the minister of justice, be tried before a court in northwest territories. This authorization was given in a bill passed by the House.

Bouncing Immigrants

Feeling Seems To Be Veering Away From Coasting People To Come To Canada

Three members of parliament, a Liberal, a Conservative, and a United Farmer, spoke the other day against continuing a heavy expenditure to induce immigrants to come to Canada. They represent farming districts in Alberta, Ontario and Quebec. There is reason to think that the view they express is shared by many among farmers, and perhaps less rapidly, among townpeople. The advisability of "coasting" people to come to Canada is the point at issue.

There is reason in Canada for more people, of course. There are people to spare in other countries, particularly in Great Britain. Sending agents abroad to invite people to come to Canada brings a response; there is no doubt about that. But perhaps more would come if we stopped inviting them. There never were so many people wanting to get into the United States as since the "quota" law was passed. The closest analogy across curiosity as to what lies beyond it. —Edmonton Bulletin.

FEELING WORN OUT

When the Blood Becomes Watery a Breakdown Follows

How many girls and women suffer from headache, nervousness, and a constant feeling of weariness and listlessness of the heart at the end of the day. Of course, all these symptoms may be due to a watery blood, but any of them show that the blood is weak. For this reason, good health can only be regained by enriching the blood. This should be done without the use of medicine. Nothing else acts so promptly and so surely as Dr. Williams' Pink Pills. Every dose helps to enrich the blood and tones the nerves and thus brings new health and vigor to the body. MAGIC BAKING POWDER

There is far more MAGIC BAKING POWDER used in Canada than of all other brands combined. MADE IN CANADA. E.W. GILLET CO. LTD. TORONTO, CAN.

Canadian Stock For United States

American Investors Continue To Look To Canada For Foundation Stock

Some of the world's finest dairy stock, Canadian owned, went to the United States at the sale held recently of the famous Inuit herd of purebred Holsteins at Woodstock, Ontario, Canada. W. W. Walsh, superintendent of agriculture of the Canadian National Railways, who returned to Montreal after the sale, described the sale as undoubtedly the most outstanding herd dispersal sale of purebred dairy stock ever held in Canada.

Internationally famous stock, males and females which hold continental show ring records, were sold at the sale, which was held for the purpose of disposing of 70 head of the herd of J. W. Inuit & Sons, well-known breeders at Woodstock, Ont. The stock was very prominent at the sale, and took away some of the best animals, which are only another indication, states Mr. Walsh, that American breeders continue to look to Canada for their seed stock.

The famous all-American bull, Albrecht Sylvia Lad, which headed the Inuit herd, was sold to a Canadian breeder, M. L. McCarty, of Sussex, N.B., for \$3,000, and Mr. McCarty also secured a fine cow, in line with his present policy of building up one of the finest show herds on the Continent.

The full sister of the champion bull, Aggie Sylvia Third, went to the United States for \$5,000. These two animals comprised the all-American progeny of Dan last year.

The average price per head for the 60 head sold at the sale, stated Mr. Walsh, was \$535. A number of the animals went for round \$1,000 a piece. A yearling bull was sold to an American buyer for \$2,000 and the all-American cow of the herd, was taken up by a Canadian buyer at the same price.

Minard's Lintner for Sick Animals

Straw Bed is New Product

Good Substitute For Lumber In Construction of Buildings

Paper made from corn stalks has been proven successful in the middle western states. Now the West Coast, Canada has found a new and profitable use for straw. A company has been incorporated in Regina for the manufacture of straw-board to replace ordinary lumber in the construction of buildings and one machine has recently been placed in operation on the farm of T. A. McCusker, one mile north of Regina.

Patents for Canada have been acquired. The machine, it is stated, compresses the straw under a pressure of 100 pounds to the square inch, the product being laced with wire and turned out in boards 14 feet long by five feet and two inches thick. The machine turns out 4,000 square feet of straw board per hour. It is contended that the product is fireproof on account of the pressure to which it is subjected and that it possesses insulating qualities to a high degree.

Far Farming Ranch

A. M. Moore, from Minot, North Dakota, has bought a section of land near Fish Lake, Man., 18 miles west of Wawota, to be used as a fur, skunk, and raccoon, the breeding stock to come from the States.

Exceedingly Lost

Speaker (after forty minutes of the usual talk) And so at 20 I faced the world with 50 cents and a clear conscience.

Very bored voice from the rear row: "And what happened to the conscience?"

Keep Minard's in the Medicine chest.

Guarding Canada's Coastline

External Vigilance Of Lighthouses Attendants Makes Water Commerce Possible

Except in fog or storm, Canada's rapidly growing water commerce seldom gives even a passing thought to the vigilant vigilance of a service which makes that commerce possible, says the Boston Transcript. Only in time of trouble is attention paid to the 11,702 individual establishments of the lighthouse service guarding the 52,800 miles of Canada's coastline.

From Cape Race, at the extreme eastern point of this continent, to Queen Charlotte Islands on the Pacific Ocean, over 200 persons are employed in guarding the paths of trade. The lighthouse service in which they are engaged consists of 1,771 lighthouses, 260 fog signal stations, 543 gas and signal buoys, six submarine bells, twelve lightships, and 8,470 unlighted buoys, beacons and day marks.

Distribution of the various orders of lighthouses, according to regions, is as follows: New Brunswick and Bay of Fundy (both shores), 170; Prince Edward Island, Gulf of St. Lawrence and Strait of Belle Isle, 248; Nova Scotia, south and east coast and Cape Race, 186; Quebec, Lower St. Lawrence and Bay of Chaleur, 260; Montreal, 242; Prescott and upper St. Lawrence, eighty-six; Parry Sound and Lakes, 173; Kenora, nine; Manitoba, sixteen; Victoria, 141; and Prince Rupert, fifty-six.

Canada's War Legacy

Over 112 Millions Is Required For Interest On Debt

Canada's ordinary expenditures (excluding of course, her outlay upon capital account), exceed 250 million dollars per year. Of this great sum, nearly 165 million dollars is directly attributable to the Great War, although the war has now been over for more than a decade.

Interest on the war debt demands over 112 millions; war pensions, over 40 millions; soldiers' civil re-establishment, nearly 8 millions.

While expenditures attributable to the Great War mount up to almost 165 millions, the so-called war taxes raised less than 145 millions in the last fiscal year, the greater part of this being secured from the sales tax, stamp taxes and income tax.

War taxes have not been more than one-third of Canada's revenues. Customs and excise duties furnish the country with more than half her ordinary receipts.

Sores Heal Quickly—Have you a persistent sore that refuses to heal? Then, try Dr. Thomas' Electric Oil. It cures the sore in a few days, carry away the proud flesh, draw out the pus and prepare a clean way for the new skin. It is a recognized healer among old and young. You can certify that it healed where properly applied.

Many Trails To Parks

Barff, Jasper, Ugo, Kootenay, and Glacier National Parks, in the Canadian Rockies all have trails well marked and very pleasant to travel, some of which extend for 300 miles.

Don't Let Foods Stale

Foods that ordinarily stale quickly will stay fresh and tempting a surprisingly long time if you cover them with Para-San Heavy Waxed Paper.

Four grocer, druggist or stationer has Para-San in the handy, stationary knife-edged carton. For those who prefer a lighter paper put up in sheets, look for Appleford's "Centre Pull" Packs.

NEED FOR MORE RESEARCH WORK IS STRESSED

Halifax.—"Don't be content with standard rate runs, nor expect tremendous results in a year, but be confident in the future of scientific research in Canada."—If you do this, you have nothing to fear for the future of the Dominion in industry (nature of the Dominion in industry is nationalized," said Dr. H. M. Tu, president of the National Research Council, speaking before the Canadian Manufacturers Association on the work of the council in its investigations into Canadian resources.

Outlining the unprecedented development of research into the scientific phases of industry in Britain, the United States, Japan and Italy, since the war, Dr. Tu told the manufacturers the time had come for Canada to take her place with the other nations of the world in the development of laboratories and the special training of scientists to man them. "But it will be money wasted," he said, "unless the manufacturers themselves are alive to their opportunities and employ them." The idea is rapidly passing that we must get our scientists from other peoples. Too many of our brilliant men are engaged in building up the industrial life of foreign lands.

Speaking of the work that had already been done by the Institute of Technology, Dr. Tu indicated the importance of industry, which in three years of research, had been placed in a position simply able to compete in the world market. During the past year 100 investigations had been carried on in the development of new resources and this work would be greatly extended in the new building, with the addition of students now being trained.

Discuss Tariff Question

Canadian Manufacturers Association To Make Pronouncement
Halifax, N.S.—The manufacturers who take one view on protection but who produce and another on what he buys not only is inconsistent but he undermines the very position he seeks to safeguard. During the past year of President L.V. Stinson at the annual conference of the Canadian Manufacturers Association, at which the report of the tariff committee was presented, with a motion that a committee be appointed by the president to draw up a pronouncement on tariff matters.

Canada's tariff problem was different from that of any other country, said H. M. Jaquays, Montreal. On one hand were the agriculturists entitled to special treatment in their marketing activities. Industrial development was essential. Any tariff policy must be shaped toward the goal of cheaper production, requests, to the tariff committee should always be qualified to that end.

Cannot Return To Germany

Former Kaiser Is Barred From Fatherland For A Further Period
Berlin, Germany.—Former Kaiser Wilhelm's hope to return to Germany to spend his last days was postponed again when the Federal Council voted 42 to 4 in favor of a government bill lengthening by three years the law for the protection of the republic, which would have expired soon.

The law permits the government to keep the former Kaiser out of Germany as a menace to the Republic. It was passed by the Reichstag in the summer of 1922 as an emergency measure, after the assassination of Walter Rathenau.

His Majesty's Condition Is Improving

Bulletin Issued By Physicians Show Satisfactory Progress
Windsor, England.—King George suffered no ill effects from the excitement of receiving the outgoing and incoming Prime Ministers on successive days.

Three physicians visited the monarch recently and issued a bulletin showing satisfactory progress. Complete recovery probably will be slow, but all keen anxiety has passed from the royal household.

C.N.A. Earnings
Montreal.—The Canadian National Railway gross earnings for the ten day period ending May 31, 1929, were \$7,549,000, as compared with \$7,545,000 for the corresponding period of 1928.

W. N. U. 1759

Flames Creates Havoc In Northern Mining Town

Cranberry Portage Suffers Heavy Loss Through Fire

The Pas, Man.—Surrounded by a wall of fire, forest rangers, railway construction workers, miners and every available able bodied man in Cranberry Portage, little Manitoba mining town, on the shores of picturesque Lake Athabasca, battled to save what remained of the settlement after the flames had brought destruction the day before. It was the townsite of Cranberry Portage, constructed only a few months ago, across the railway tracks from what is now known as the Old Town, that was destroyed when flames from a forest fire swept in from the north.

Within 20 minutes, a score of dwellings, several business buildings, the railway station, and hospital, were smouldering ruins, and 200 persons out of the town's 300 population had been rendered homeless. There were no casualties. The property loss will run into thousands of dollars and many small personal fortunes were swept away. No insurance was carried, as Cranberry was considered a small personal fortune, surrounded by the unscrupulous companies, surrounded by it as before.

Ramsay MacDonald To Lead

Accepts King's Invitation To Form a Cabinet

London, England.—Right Hon. Ramsay MacDonald, leader of the Labor party, accepted the King's invitation to form a Cabinet to replace that of Right Hon. Stanley Baldwin, Conservative Premier, who resigned. Official announcement of the acceptance was made at Windsor Castle, where the King was ill, a few minutes after the Labor leader had called and left to go back to London. He arrived at 11:04 a.m. with his son Alastair MacDonald and Lord Arnold.

The King's secretary, Colonel Seyd, escorted him inside the castle. He was 57, slightly more than an hour, leaving at 12:18. It was the second cabinet Mr. MacDonald has been called upon to form. The first was that of more than five years ago when the Labor party, with the help of the Liberals, was elected to the British government.

Forest Fires In Japan

Damage To Property Already Over Three Million

Tokio.—Heavy rains over the island of Shikoku and Kyushu have greatly lessened the threat of forest fires there, although resumption is feared when the weather dries. Fire fighters are rebuilding their efforts hoping to end the menace while the rain continues.

The governor-general of Shikoku reported losses on his island of \$1,414,362, 133 seriously injured, and 3,206 houses destroyed, 4,710 homes lost, and about \$3,520,000 damage to urban property. Damage to the forests had not been estimated.

Appreciate Their Leader

Ottawa.—Paying tribute to the party leadership of Hon. R. B. Bennett in parliament this session, Conservative members and senators united in a dinner tendered to him. Expressions of loyalty and appreciation for Mr. Bennett's leadership were voiced.

Passes Railway Bill

Ottawa.—The Senate committee on railways recommended without amendment the bill authorizing the Canadian National Railways to construct terminal facilities in Montreal at an estimated cost of \$3,400,000.

Fear Break Between China and Russia

Trouble Arising Over Arrest of Soviet Officials in Manchuria

London, England.—Russian troops were said by a Peking dispatch to the Express, to be massing on the Manchurian frontier to prevent thousands of Chinese from leaving Russian territory. The flight of the Chinese was in fear of arrest and deprivation of their belongings in retaliation for the arrest of Soviet officials in Manchuria.

Rengo news agency of Japan reported that Soviet consul general Kuznetsov, of Mukden, was under arrest at Hailar and that intense anxiety was felt in the Harbin Soviet community where a complete break between Russia and China was feared.

The strained relations between the two countries began with Chinese raids on Soviet consulates in search of documents to support charges that Communists were secretly interfering in Chinese internal affairs. The raids were followed by a sharp note of protest by the Soviet virtually suspending diplomatic immunity of Chinese officials in its territory.

REVISION OF GRAIN ACT IS RECOMMENDED

Ottawa.—Complete revision and consolidation of the Canada Grain Act, at the next session of Parliament is recommended in an unanimous report tabled in the House of Commons by the Parliamentary Committee of Agriculture.

The chief recommendations contained in the report are the following: Amendments to the Canada Grain Act to prohibit mixing in the four statutory grades of red spring wheat; No. 1 hard, No. 1 northern, No. 2 and No. 3. This amendment would become effective until August 1, 1930.

The current standard for all terminal elevators of all statutory and commercial grades of red spring wheat to be a composite sample equal to 75 per cent. of the average quality of the grade. The minimum quality of such grade at the primary inspection point. This provision would be made effective on August 1, of this year, and would apply to the current year's crop.

The board of grain commissioners to be composed of three members at present. In addition to these there will be four assistant commissioners, who are to be located, one in each of prairie province, and one at the head of the lakes. The commission itself would be given power to name its own headquarters.

Certain increased powers to be given to the board to assess loss and change in any case where a complaint is made, with power to enforce its findings in any court of competent jurisdiction. Appeal from such may be allowed in the district or county court in which the person entering such complaint resides.

The recommendation is made that the standards board be constituted on a different basis from that now prevailing. The producers would have one-half of the representation on the board, which would be comprised of the following:

The Board of Grain Commissioners, the chairman of the Board of Grain Appeal, the chief inspector, the chief chemist, the Dominion cerealist, one representative of the millers, four representatives of producers from Alberta, five from Saskatchewan, three from Manitoba, and one from British Columbia.

SURVIVAL OF AN ANCIENT ICE CUSTOM

WINS ORATORICAL CONTEST

Roche Placed 18th of Montreal
The oratorical speech of "Canada Among the Nations" won him the Canadian Oratorical contest at Toronto on May 22. Plural will represent Canada at the international contest in Washington.

Saskatchewan Leads

In Scout Training

Had More Leadership Courses Last Year Than All Other Provinces

Regina.—Saskatchewan was able to report more training courses for scout leadership than all the other provinces combined during the year ending May 31, 1929. It was stated by W. J. P. Selby, provincial secretary of the Boy Scouts Association, that more than 252 adults took the indoor Gilwell training courses, 409 of these being granted certificates from Dominion headquarters.

The figures were disclosed at the annual meeting of the Canadian Council of the Association at Regina, Saskatchewan, on May 22. The council reported an increase of 80 troops and 273 leaders in the Dominion during the year. There are now 55,000 scouts and leaders in Canada.

An indication of the constant progress of the organization, it was stated that 24,170 scout rank and proficiency badges had been awarded to 1929-30, an increase of 5,628 over the preceding year. The report of the national council of the association showed that, through 82 centres, 10,000 boys had been initiated, more than 60,000 children last Christmas, including 5,000 children of newly-arrived immigrants.

Going To South America

Tide Of Immigration Now Running In Southwesterly Direction

San De Janeiro, Brazil.—The tide of emigration, which for decades flowed westward across the Atlantic to New York and other American ports has definitely set in a southwesterly direction.

European steamship companies are operating larger and faster steamers to South America, than were the pre-war emigrant carriers of the North Atlantic, with much better accommodations. These new lines, say Brazilians believe that their country is on the verge of a great increase in population with consequent agricultural development.

Japanese Ship Afire

London, England.—A message to Lloyd's from Yokohama said the Japanese steamer "Ugo Maru" was reported a total loss from fire with the crew and passengers believed drowned. The fire began May 31. Other Japanese dispatches said the ship was afire with 700 Russian passengers, 380 of them women, and 45 Japanese crew members.

Mount Vesuvius In Eruption

Heavy Fall Of Smoke and Ashes Hangs Over Naples

Naples.—Heavy clouds of smoke, laden with ashes, from the belching throat of Mount Vesuvius, hung over Naples and turned the brightness of noon into a kind of twilight.

People were unable to see their familiar land mark which was clouded by the screen of smoke issuing from its crater.

The Associated Press correspondent visited Terzigno and found conditions terrible. Families were withdrawing with all their belongings and effects. They flocked into the churches on the line of retreat, invoking Saint Gennaro and praying before shrines.

Troops took possession of villages to prevent marauding after the inhabitants had departed.

ESTIMATES FOR DEFENCE MEET WITH OPPOSITION

Ottawa.—Canada had denounced was a national policy and for this reason it was inconsistent that the estimates in the department of national defence should show an intention to increase the military establishment.

MacPhail was emphatic in his opposition to the national defence estimates and during the consideration of cadet services moved an amendment to reduce the amount of the appropriation from \$500,000 to \$1. The amendment was defeated 56 to 15.

The only woman member of parliament declared she would like to see Canadians take the stand that would be forever abandoned. She was Mrs. J. P. Woodworth, Labor, Winnipeg North Centre, complained that the supplementary estimates would have the total for the year at more than \$21,000,000. While it was true that only a few reckless adventures or ruthless predators would be so bold as to attempt to foster either war, a conflict was quite possible so long as conditions remained as they were. The pile up of debts in the last year was \$1,390,000,000.

Mr. Bennett also urged that more be done to cultivate home markets and part of trade with Canadian countries which annually made necessary the importation of \$1,390,000,000 worth of foreign goods.

The United States, he said, was not going to allow Canada to invade its markets. Canada should keep her own markets free from foreign competition.

Western Canada Air Mail

Negotiations With Various Airway Companies Still Proceeding

Ottawa.—Negotiations between the post office department and the various airway companies of Western Canada in regard to the proposed air mail routes, with Calgary and Edmonton and intermediate cities are still proceeding, but it is considered most improbable here that action will be taken until the close of Parliament.

Officials of the department said recently that the problem presented by the desire of several companies to share in the contract appeared to require a solution than several weeks ago.

Receives Appointment

Dr. Atty. Of Saskatchewan University Accepts Post In Regina

Saskatoon.—Dr. Thomas Atty, professor of physics at the University of Saskatchewan for the past four years will leave for Regina at the end of June. He has received the appointment of senior physicist to the Imperial Chemical Industries.

This organization, which is under the presidency of Lord Melchett, is an amalgamation of the chemical industry of Great Britain. They have recently built a large research laboratory in Cheshire, where they will carry on research in pure and applied science. Dr. Atty will be in charge of the physics research.

Wrong Man Convicted

London, England.—After serving three months in prison, Ernest Lee 39, received a pardon and \$500. It was found after he had served this time that P. C. Larkin, wife of the brewer's agent, and collecting a commission, that another man guilty. The guilty party, already in jail on another crime, confessed.

WILL APPOINT TWO MORE TRADE AGENTS TO U. S.

Ottawa.—Trade and commerce estimates "buy from the countries they buy from us." That was the slogan with which Conservative members of the House of Commons urged when estimates of the department of trade and commerce were under review. The debate covered a very wide field. It took in the new United States tariff, the opportunities of trade with the countries of South America and methods of advertising Canada abroad.

The comparative advantages of a foreign trade and a domestic trade brought on a discussion which eventually ended in an argument on the subject of trade and commerce, piloted by Hon. J. H. Macphail, minister of trade and commerce, seemed fairly satisfactory to all parties not moved through with reasonable facility.

The announcement by the minister that two new trade commissioners were being located in the United States brought the first opposition. Conservative speakers insisted that if the new tariff act of the United States became law, Canadian trade commissioners could bring more trade almost anywhere else than to the United States, a fruitful field for trade expansion.

"During the past five years," said Hon. R. B. Bennett, Conservative leader, "we have even seen the people of Canada when Canadian manufactured goods have found a market in the United States, that market has been closed to them by the United States tariff, either by changing the classification or by a presidential proclamation under their classic tariff provisions. That was the intention of the tariff act of the United States. It was put there for that purpose. Therefore let us devote our time and energy to other markets."

He entered a preceding speech by Alfred Macphail (U.P.A.), (Hon. Dr.), that greater efforts be made in South America. The people of South America, other things being equal, are better friends with Canada than perhaps any other country. Mr. Bennett also urged that more be done to cultivate home markets and part of trade with Canadian countries which annually made necessary the importation of \$1,390,000,000 worth of foreign goods.

The United States, he said, was not going to allow Canada to invade its markets. Canada should keep her own markets free from foreign competition.

They have recently built a large research laboratory in Cheshire, where they will carry on research in pure and applied science. Dr. Atty will be in charge of the physics research.

To Be Presented At Court

London, England.—Thirteen Canadian women are to be presented at Court, June 26. Those to be presented by Mrs. P. C. Larkin, wife of the brewer's agent, and collecting a commission, that another man guilty. The guilty party, already in jail on another crime, confessed.

Colonial planting at La Pas, Peru, in which the whole community joins in prayer for a bountiful harvest. The photograph is of a painting by J. E. Simpson, O.A.C. a Canadian artist.

Canada Has Doll Industry

Toronto Firm Makes Them Better and Cheaper Than Germany

Dolls manufactured in Toronto have cut German dolls in the South African, New Zealand and Australian markets, according to G. F. Stevens, Canadian trade commissioner in South Africa.

In a recent interview, Mr. Stevens said the greatest surprise he got during his several years' regime as Canadian trade commissioner in South Africa, was that a Canadian firm was able to produce better and cheaper dolls than the Germans and understand them in the South African market.

The history of this enterprise is a most interesting one. In 1921 two Toronto brothers started in one room at 591 Queen St. W. Their present warehouse, which they have occupied for two years, comprises over ten thousand square feet of floor space. Last year their business increased 50 per cent.

Recently the buyer of a large Toronto firm ordered a sample doll. He took the sample to Germany and asked a firm to duplicate it in quality and price. They were unable to do so. The Toronto firm has 300 different types of dolls on the market and they are almost unable to keep up with the demand.

"How did you learn the doll-making business?" one of the brothers of the firm was asked. "I taught myself," said one of the brothers. "It seems that we both had a natural bent for the business. We designed all our own dolls and have instituted all kinds of new features that the German cannot duplicate."

In a visit to the factory boxes filled with legs, arms, heads, bodies, dresses, shoes and all the requisites of doll-making were seen. In the shipping department were cases full of dolls awaiting transportation to Cape Town, Auckland and Sydney.

Hog Rations

Used as a Substitute For Skim Milk in Hog Ration

While it is recognized that dairying and hog raising go well together, one need not be discouraged in undertaking to raise hogs in the absence of a by-product of dairying. Fishmeal, a commercial product of considerable importance, is a useful substitute to skim milk as a supplement to the grain ration during the fattening period.

Carried out at the Agassiz, British Columbia, experimental farm, during sixty-four days, the two feeds were compared. Two pigs were fed a ration consisting of one part bran, one part corn meal, two parts shorts, and seven per cent. fish meal. Two other pigs were fed a similar basic ration except that no meal was included. The hogs were given instead of the fattening six pounds of skim milk per day per pig. The milk was charged at 25 cents per hundred pounds, and the fishmeal at 80 per ton. While the skim milk fed pigs produced slightly cheaper gains, the rate of gain was practically the same for the two groups. The report for last year, published by the Department of Agriculture, at Ottawa, the superintendent of the farm concluded that the results secured from this experiment and previous ones show that skim milk at 25 cents per hundred pounds gives cheaper pork than fishmeal at 75 to 80 a ton. The difference in the cost in this test amounted to about two cents a pound of gain made by the hogs.

In Many Languages

During May there were issued from the Regina Bible House, Scriptures in 15 different languages. These were English, German, Norwegian, Swedish, Polish, Greek, French, Italian, Russian, Rumanian, Hungarian, Bohemian, French and Yiddish.

Isa Lake, in Yellowstone National Park, sends part of its waters to the Atlantic and part to the Pacific at certain seasons.

"If you might have — your face is just stubble." "But we have just won herings for week and the house are packing through." — Lucille Nabbe, Leipzig.

W. N. E. 1759

Thousand Accidents Due To Carelessness

Forty Per Cent. Caused By Negligence Of Drivers At Railway Crossings

In nearly one thousand accidents cases reported to the Board of Railway Commissioners during the past year, there was danger of loss of life or damage to property because of negligence at highway railway crossings, according to a bulletin issued by the Canadian National Railway System. Under the various classifications of negligence more than 40 per cent. of the accidents occurred where crossing gates are operated. There were 325 cases where vehicles broke or damaged crossing gates, which had been lowered, 22 where drivers ignored signals and drove through gates; 35 cases of driving under gates which were being lowered or lowered even cases of driving on to crossings after opposite gate had been lowered, five cases where drivers crossed after the gates crashed into the gates, and three accidents due to pedestrians climbing over or under gates.

Under the heading "Unexcusable Negligence" the Board lists 105 cases, in which 41 drove into the side of moving trains, 100 drove into the side of standing trains, and one drove between the railway cars during switching. Twelve persons stopped on the street under which a crossing crossed, and seven drove their automobiles along the railway tracks, while one driver went to sleep in his car while after parking directly on the railway line, and another stopped his car in the middle of the crossing while he was waiting for something which he had dropped, and the driver of a wagon stopped on the railway tracks to adjust his load. Twelve drivers were responsible for eleven accidents so reported and the balance of the list were under the heading of "Not Classed."

Operating department officials of the Canadian National System point out the stress under which such negligence by automobile drivers and other places locomotive engineers who have to be constantly on the alert to avoid injury or killing such people for whom every possible safeguard is provided, though they will not avoid themselves the greater attention offered and also point out that large numbers of locomotive engineers suffer nervous breakdowns during their service because of this extra load on their endurance by the carelessness of people using the high ways.

The Music Of The Bagpipes

Question Is Asked Is It Music Or Just Regulated Noise

Opinions may differ among the Scotsmen as to whether the strains of the bagpipes should be designated as music or just regulated noise, but the members of the Toronto Gaelic Society have no doubt in their minds as to the correct application. "It is just as exciting when people may they don't like the pipes," a speaker said at a meeting of the society the other evening. But the Gales should make some allowance for those whose ears have been untuned to the sound of bagpipes and in whose veins there flows more of the blood of ancestors who were "cut in the 40's." Most people are agreed that the "lifeline" is born with a person and cannot be acquired. It is begotten of instinct, not of training. To a Gael, six pipes in a drawing room playing "Mornaym" is the approach to celestial art ever attained by man, but the non-Gael has other opinions on the subject. The latter are to be pitied, no doubt, but surely not condemned. It is just their misfortune, not their fault. — Toronto Globe.

Making Things New

To make things new is not the same as to make new things. To make new things is the work of the hand, to make things new is the work of the heart, all things are made new. They are made new without changing a line, without altering a feature. Eternity in your heart an object of love, and you have renewed the universe. You have given an added note to every bird, a fresh joy to every brood, and a note to every flower. — George Matheson.

Sky Is the Limit

A valuable addition to any property you may own is the air above it. Legally, you have a right to sell or lease the air, although some lawyers contend that the air is like navigable water and may not be interfered with.

It is getting the kite on a string that makes it soar.

H. L. TAYLOR,

newly appointed purchasing agent for the Canadian National Railway at Vancouver, who will have charge of all purchases throughout British Columbia. Mr. Taylor has been associated with the Canadian National Railway and its component companies since 1900, when he joined the staff of the Canadian Northern in Winnipeg. He succeeds C. L. LaRue, resigned.

Cherry Growing in Manitoba

Breeding Of New Varieties Is Producing Good Results

Cherries of fair size and fair quality are produced in the province of Manitoba. At the Morden Station of the federal experimental farm system, the breeding of new varieties by crossing and the growing of hardy varieties brought from cold countries is producing fruitful results. Losses from injury by winter killing and freezing back of named varieties at the Morden station is leading to more and more dependence on seedlings from hardy European varieties. Pairs of fruit were harvested last year from seedlings of the varieties Shubunkin, and Vladimir, which are proving hardy. Four named varieties grown at the station. According to W. H. Leslie, superintendent of the station, in his report published by the Department of Agriculture, at Ottawa, the fruit from some of the trees while source of fair quality. The best results were obtained from trees on their own roots being sufficiently hardy to withstand the cold of winter even in season of light snow fall.

Poultry Pool

The Poultry Pool has formed a new organization under the name of the Canadian Poultry Pool Limited which will be the selling agency for the individual pools of the four western provinces, with head office at Winnipeg, and with A. W. Landreth as president and superintendent.

Got It Anyway

"Smith is unlucky—he put his whole fortune into his wife and so that his creditors would not get it." "He did right." "But his wife has eloped with his chief creditor!" "Do you play golf?" "No; I was born a liar."

A HARD PAR FIVE

No. 2, Old Man—450 yards, Par 5.

No. 2, Old Man—450 Yards, Par 5.

The slope of the ground, the bunkers and traps, as well as the length, make this one of the many difficult holes on the Jasper Park Lodge Course, Jasper National Park, Alberta, over which the Canadian and Western Canada Amateur Championships will be played, August 18-24, this summer. Par for the entire course is 72, and the nearest to it any amateur has come to date is 74. Compared with some other holes this one is easy and that means a lot of reputations may be wrecked this summer, not a few on this right hole.

Protecting Calves Against Bluetongue

Disease Is Preventable By the Use Of Vaccines

In certain sections of the Dominion, particularly where the drainage is poor, cattle owners suffer losses through the disease of bluetongue which attacks calves after they are six months of age and up to the time that they are two years old. It seldom attacks cattle of other ages and rarely affects other classes of live stock. Dr. A. E. Cameron, chief veterinary inspector of the Dominion of Agriculture, at Ottawa, describes the disease, which is marked by loss of appetite, dullness and high temperature. Swelling of the body above the legs at any point is a common symptom and is accompanied by a crackling sound when pressed with the hand. The crackling, Dr. Cameron explains, is due to the formation of gas in pockets in the tissues beneath the skin. Fortunately the disease is preventable by vaccination with bluetongue Aggressive Filtrates of Vaccines products obtainable through local agents, druggists and veterinarians. In Bulletin No. 117, of the Department of Agriculture, instructions are contained for submitting specimens to the laboratory of the department for examination. A few drops of blood or a few drops of the blood if dropped on a sheet of clean note paper and allowed to dry, will answer as a specimen. In either case the package must be carefully packed with the sender's name and address and the history of the case and carefully wrapped in paper. The instructions contained in the bulletin, which is obtainable from the Publications Branch of the Department, Dr. Cameron recommends as a preventive measure the inoculation of young calves before they go to pasture, and in badly infested districts inoculation again in the fall is recommended.

Shared Honors With Foch

Humble Farmer Salaried By Troops Waiting For Great Soldier

A British spectator of Marshal Foch's funeral procession in Paris, beautiful incident unrecorded by the newspapers.

Some graves were empty, and two lines of soldiers were drawn up on one side, waiting for the great soldier to pass by the last time. Presently there appeared from a side street a small and very humble house followed by five or six poor people on foot. It passed down the Rue de Rivoli, and from his balcony the spectator saw how at every point the troops gave the military salute.

Application Is Delayed

The hearing of the application from poultry producers of the western provinces before the tariff advisory board, asking for an increase in the duty on all foreign shell eggs, which do not follow the five or six per cent. on Canadian extras, will not be heard until September, according to intimations which have reached Ottawa.

Adopting New Method To Fight Tuberculosis

Science Is Mobilizing Its Forces In Effort To Conquer "White Plague"

Some of the accomplishments of the first great mobilization of science in a fight against tuberculosis under the National Tuberculosis Association are revealed by Dr. Kendall Emerson, managing director of the association.

These results, he says, may have a revolutionary effect upon the methods of attacking disease germs.

A revolution American institutions have pooled their research brains and facilities in a national drive to eradicate tuberculosis. Through development of a synthetic fluid in which microbes flourish, a technique has been evolved for discovering by chemical analysis all the substances of which germs are made—their proteins, fats and sugars and how these are built.

The aim is to isolate the specific poison and then to find an antidote. What is accomplished is expected to throw a new light on the other germ diseases that still are uncontrollable.

This period research is sponsored by the National Tuberculosis Association through a special committee on research.

A harmless bacillus which lives on Timothy Hay and is named the Timothay Bacillus, has become an important factor in this fight. The Timothay organism has been adopted by the scientists as the laboratory "control."

A control in laboratory practice is a subject so simple that one under test that it may be used for comparison with the human tuberculosis bacillus. The Timothay bacillus still produces disease in no known animal. Its value is the guidance it may afford in the search for the all-important factor in the disease-producing process.

Other germs, all harmful, belong to the same family as the Timothay Bacillus are those that cause leprosy and bone and bird tuberculosis.

Whaling In North Pacific

Whaling, Steamers Leave For Summer Season In Northern Waters

The whaling steamer for the west coast season again for the summer season. The whaling steamer for the west coast season again for the summer season. The whaling steamer for the west coast season again for the summer season.

While in most parts of the world, whales are reported to be vanishing, the last few years have given little evidence of this tendency on the north Pacific and the annual catches appear to be fairly constant. The average being about 300 annually. The whale is no longer killed for its oil alone, although that is still an important article of commerce. A wide variety of products are now fashioned from the bone and carcass of the whale, such as "eggs" and "crops" plumes which, as they were originally known, are now legally available owing to the scarcity of the birds that bore the bones. The whaling industry is coming forward with a substitute manufactured from certain parts of its bony structure. Baited whale tails are a delicacy in the far east and whale meat is growing in popularity in the southern states and in Europe. Whale bone is still used in the making of corsets and hard-fried brushes. The bone also provides a substitute for ivory. Another valuable by-product of the whale is the blood and crushed bone and dried fish which is used extensively as fertilizer.

Egg Tariff Correction

The egg producers of the western provinces are not asking for an increase in the duties on frozen eggs. In the report of the hearing of the tariff advisory board, May 15, it was erroneously stated that the tariff on frozen eggs applied to all eggs which did not conform with the Canadian extra specifications. It should have said that the tariff on frozen eggs is from three cents to nine cents.

No Spring There

Landlady: "Good morning, Mr. Stupps. Did you sleep well?" New Boarder: "Only so-so. I'm afraid I'm not used to a three-season bed."

Landlady: "Three season?" New Boarder: "Yes, one with no spring in it!"

"I've forgotten half of all I learned in college."

"Which was it, the fraternity grip or the variety yell?"

Does Mixed Farming Pay?

Farmers in Carleton District Apparently Think It Does

The Carleton (Alberta) correspondent of the Lethbridge Herald writes: Here in the Carleton district farmers know about mixed farming. \$100 a week from cream checks right at hand, at a time when it used to be that everybody's cows had dried up; \$4,000 a week from (and recently it was \$10,000), hogs; and milk sales, over \$15,000 in new money from sale of horses, which does not include many other horses sold in trade for tractors. This "horse" money is like finding it, too, for they have been mostly mere "grass eaters."

That mixed farming is working a miracle here can be readily seen when one comments about the worry-storms and Jule sprays. "Doesn't it make grass?" and "Who is mowing?" or "I should worry?" or the usual remark, "Lafayette! Yes, but why plant so much wheat anyway, and sell it, then have to buy chicken feed and hog feed at elevator prices?"

The regulations now under way to place 400 milk cows on the U.I.D. is going to give a wonderful impetus to the creamery business, and thousands of dollars of cream checks will be written in this country in a few years where hundreds are now written. Increased milk production will increase the hog production and other by-products, particularly poultry.

In fact, a vision now seen of the Carleton district is more rosy than for many years past. The individual holdings may be smaller and the demands of the market for wheat in the big "wheat" areas, but these returns are growing to be sure and the returns from wheat are going to disappear, and machinery bills and big land payments, etc. At least, that is how many farmers picture it today.

Strawberries For Canning

Tests Made For Suitability For Canning Of Different Varieties

The strawberry holds an important place in the desert fruits enjoyed by the people of Manitoba. The home garden crops on many farms provide from strawberries during the summer season. The strawberry is a valuable fruit for canning purposes. The strawberry is a valuable fruit for canning purposes. The strawberry is a valuable fruit for canning purposes.

Bicycle Gaining In Popularity

It is evident from an official report recently issued that the bicycle is gaining in popularity in Canada. In 1928 the production of bicycles in Canada reached a new high figure, with the selling value of products 52 per cent. higher than in 1921. Last year, 27,999 "wheels," as bicycles are popularly known, were sold by Canadian manufacturers valued at \$899,480.

Lady: Walter, you have let a hair fall in my soup.

Bald-Headed Guy: You flatterer.

"Think what a misfortune it will be for us if you die."

"Consume yourself. I will arrange not to die if it will trouble you."

— Duane Hunsford, Windsor.

Work of Counterfeiters Is Now Engaging the Attention Of the League of Nations

It is not generally known that since the Armistice there has been a huge increase in the crime of counterfeiting, and amongst the lesser but practical endeavours which have engaged the attention of the League of Nations is an attempt to minimize this international evil.

The extent of the menace is indicated by the results of an enquiry taken in 43 countries which showed that in a three year period no less than \$3,000,000 in counterfeit currency was seized by the police authorities, while it was estimated that at least twice that amount remained in circulation.

Since the war the multiplication of currencies and the vagaries of the exchange has afforded wide scope to counterfeiters who availed themselves of the differences between the penal legislation of various countries and the lack of co-ordination between their police authorities to ply their trade and escape punishment.

This led the French government in 1927, to suggest that the matter should be taken up by the League of Nations.

Religion in Russia

Soviets Learning Nature of People Cannot Be Changed By Law

The Russian soviet government has abandoned so many of the things it stood for when it came into being that it would not be surprising to receive confirmation of the report that it is about to abandon its official opposition to all religion.

According to dispatches from Moscow, an amendment to the constitution is to be submitted removing restrictions on religious practices. The soviet is not to abandon passive objection to religion but it is to abstain from its active efforts at suppression, and state and schools and church, and it will grant its people the right to such religious practices as they care to adopt. In other words, it will cease to persecute its people on religious grounds.

The Russian people are essentially religious in their nature. They have an inborn faith which is based on

Good Openings Here For Danish Farmers

Great Opportunity For Workers Danish Advisor Tells C.N.R. Officers

"We are pleased to know that Danish settlers are so acceptable to Canada, and I can see that there is great opportunity for them in agriculture here, provided they are ready to work," stated Chr. Christensen, government advisor in agriculture for Western Jutland, Denmark, while on his way home after escorting a party of Danish settlers to Winnipeg, where they were located under the auspices of the Colonization Department of the Canadian National Railway.

While in Canada Mr. Christensen took the opportunity of studying the work of the boys' and girls' clubs, which has proved immensely successful in Canada in raising the quality of livestock produced on the farms.

"With the same amount of work he would have to put into an ordinary farm holding in Denmark, a Danish farmer should be able to become very prosperous on the wonderfully fertile Canadian soil," said Mr. Christensen, discussing with C.N.R. officials the matter.

International Ice Patrols Searching For Icebergs In Broad Sweep of North Atlantic

New Canadians To The Fore

Difficulties Of Assimilation Of The Foreigners Seen To Be Exaggerated

The high schools of Calgary recently engaged in the preliminary of what is to be an international oratorical contest. Of the five candidates in the city finals one was born in Canada, one in England, one in Lithuania, one in Roumania, and one in Russia.

Of those five, four were immigrants, still young enough to be in high school, yet each born in a different country. All came together in competition to see which could best speak, in English be it recalled, to an assembled audience. It is not improbable that they spoke upon some subject relating to the welfare of this land in which they now live.

We hear a great deal of the difficulties of assimilation. We produce these pessimists who spend their days and nights crying aloud against the melting in of the foreigner. They often we tend to overlook the other side, and forget that there are many influences incessantly at work tending to make Canadians of these newcomers. These five oratorical contestants will serve to remind us of that.—William's Monthly

Hunting for icebergs has been a regular business on the Atlantic ocean for three months in the year since the spasm of horror passed through the world in April, 1912, when the news came that the great liner "Titanic" had crashed into an iceberg and was lost, with most of her passengers and crew. It was this terrible catastrophe that gave birth to what is known as the International Ice Patrol, whose duty it is to protect all who cross the Atlantic from a similar calamity as far as possible.

The cost of this patrol is shared by several European nations, including England and France, with the United States, but the patrol itself is provided by the United States Coast Service, and its duty is to hunt for the icebergs from the Grand Banks to the Arctic in search of floating icebergs and fields.

On the first day of April each year this hunt begins, and continues night and day until the close of June—three months of strenuous, perilous and unceasing labor, such as no other season on the face of the waters know.

When with the coming spring, winning her group on the regions near the Pole, bergs and even fields of ice break away from their "moorings" with the rise of temperature and are swept southward by currents from Labrador and Greenland, in many cases creating the routes of trans-Atlantic travel.

It was in latitude 41 degrees 45 minutes N. that the "Titanic" came to her tragic end, and enormous icebergs have been seen two degrees further south—considerably more than half the distance between the Pole and the Equator.

It requires little imagination to realize the menace of such colossal icebergs to the sea vessels across whose path they are swept for many of them weigh hundreds of thousands of tons though only one-eighth of their bulk is visible above the surface of the sea. No lights or sirens reveal their presence. In the darkness of night scarcely even a spectral glimmer can be seen before the doomed ship crashes into them.

Having encountered one of these icebergs, the exact position is marked on the chart, and a wireless message is sent out to shipping to warn of its locality. The patrol ship then stands by the oncoming peak of ice, observing its speed, the direction of its travelling, its size, and so on, information which is also wireless as a warning to ships likely to cross its path.

Some bergs will travel as much as 30 miles in 24 hours, others only five or six miles. A berg, heading south, may be caught in a cross-current and swept east or west, or back to the north, and thus it is not necessary to keep it chafely company for days until perhaps it is swept into against safety. Occasionally a landing is made on bergs or fields and a more detailed and accurate description made of it than is possible from a ship.

Was Premier Of France

Ernest Monis, premier of France for four months, in 1911, died recently at the age of 83 years in straitened circumstances at his home, in Chateaufort-sur-Charente. M. Monis was a radical republican, moderately inclined towards socialism. He was a lawyer and was at one time vice-president of the French senate.

Dairying An Important Industry

Dairying is one of the oldest and one of the most important of the industries of Canada. It owes its modern development to the introduction of the factory system for the making of cheese and butter, to the invention of the centrifugal cream separator, and to the facilities afforded by improved methods of cold storage.

Erecting Seed Cleaning Plant

The Dominion Government will erect and equip a modern seed cleaning plant at Moose Jaw, at a cost of \$150,000, and jointly finance with the Provincial Government up to \$1,000 per unit, the establishing of seed cleaning plants under the auspices of municipalities or agricultural societies.

Need Temperature Change

It is now held that chronic nervousness and its attendant ill effects occur where there is little change in the temperature conditions from season to season, and disappear when the patient migrates to higher elevations or where there is a well-defined range of weather conditions.

THE FIRST TOURIST

"Daddy, when I grow up, will you buy me trousers like that gentleman's?"—Esquella, Barcelona.

SUPPLEMENT

THE OYEN NEWS, OYEN, ALBERTA

JUNE 12, 1929

M. D. Cereal

(Continued from page 1.)

The council agreed to accept the offer of E. R. Schlosser of \$300.00 for the S.E. 26-4-4. The N.W. 23-26-5-4, offered for sale by public auction under the Tax Recovery Act 1922, and Lots 2 and 3 in Block 2 were sold.

The council decided to pay cash for work done on the 1929 taxes were paid.

The Reeve and Secretary were authorized to arrange line of credit for municipal purposes.

The council approved of the sale of the S.E. 20-28-4, to W. Kape.

The council set a cash price on the S.W. 27-26-4.

The council adjourned to meet again on Saturday, July 13, at 10.00 a.m.

J. P. Porabek, Sec.-Treas.

Survey Party Leaves For North

The geological survey party under the direction of Dr. Allan Cameron which will make a survey of mineral resources in the northern part of the province under the direction of the provincial government, left during the past week for their summer's work. The survey will be facilitated by the use of photographs of the area to be covered which were taken last year by Dominion government air photographer.

In addition to the two soil survey parties which have already gone north, a third party in charge of J. L. Doughty, has gone during the past week to the area east of Lesser Slave Lake where comprehensive investigations of soil types will be made.

CANADIAN NATIONAL Making Low Cost Vacations

Possible for thousands of Residents in Western Canada

IN arranging low fares for prairie residents, we regard this part of our work as a great and important public service. We always ready with which enables them to experience enjoyment with smoothness and efficiency.

THIS summer—escape for a little while from the dull sameness of succeeding days. Our low fares from May 15 to Sept. 30 (with a final return limit Oct. 31, 1929) make easy.

OUR trains pass through a territory replete with scenic grandeur, of historical and educational value to the traveller. Nothing superior to our sleeping and dining car service. Radio, an added feature on through trains.

THINK IT OVER

Whatever vacation section you have in mind, our local agent will be pleased to give you assistance. He will be glad to quote low fares and make all arrangements for you—write J. MADILL, District Passenger Agent, Edmonton

WORLD HAPPENINGS BRIEFLY TOLD

The question of the eligibility of women for appointment to the Senate of Canada is expected to be considered by the Judicial Committee of the Privy Council shortly.

The United States has communicated to the League of Nations its agreement with Canada concerning radio communication between private experimental stations.

Dr. Hugo Eckener, director of the Zeppelin Company, emphatically denied the trans-Atlantic crossing Zeppelin had been sold or that he was negotiating for its sale in the United States.

The treaty between Canada and the United States designed to conserve the sockeye salmon fisheries of the Fraser River, will not be ratified by the Canadian parliament this session.

Fatally struck by a wire cable which snapped under a heavy load, Mike Hizecke is dead at The Pas. The cable being used in the process of loading a gravel train, pounded Hizecke's chest when it broke.

Sir Colville Barclay, British ambassador to Portugal, died in a London sanatorium following an operation. He was councillor to the embassy at Washington in 1913, and minister plenipotentiary to Washington in 1915. He was 60 years of age.

Twenty-five British boys coming out under the auspices of the department of agriculture of the Saskatchewan Government, were among the 174 passengers from the "Andania" who arrived in Winnipeg over Canadian National recently.

A slim line of railway steel from Cranberry Portage, totting along toward Cold Lake, began to stretch farther into the rich mining land of Manitoba's north. Work has just begun on the Cold Lake branch, and the line is expected to be operating by September.

IS THERE A BABY IN YOUR HOME?

Is there a baby or young children in your home? If there is, you should not be without a box of Baby's Own Tablets. Children should be given them quickly and means should always be at hand to promptly fight them. Baby's Own Tablets are the best home remedy. They regulate the bowels, sweeten the stomach, banish constipation and indigestion; break up colds and simple fevers; relieve the minor ills of the little ones. Concerning them Mrs. Moore Cabotette, Muskoka, Ont., writes: "Baby's Own Tablets are the best remedy in the world for little ones. My baby suffered terribly from indigestion and vomiting, but the Tablets soon set her right and now she is in perfect health." The Tablets are sold by medicine dealers or by mail at 25 cents a box from The Dr. Williams' Medicine Co., Brockville, Ont.

Bread 76 Years Old

A small loaf of bread, said to have been baked Good Friday, March 22, 1852, is on exhibition here. It is owned by Mrs. Bee Hough Bartlett, 80, and was baked by her mother, Mrs. Bartlett, says a legend that a loaf baked on Good Friday will endure forever prompted its making and its preservation for 76 years.

A safe and sure medicine for a child troubled with worms is Mother's Graves' Worm Exterminator.

Two convicts were talking. "You know," said one, "I took John Thynan all the way to write a story."

"Garn," was the reply, "I took me ten years to do a sentence."

On Your Holidays

Be sure to take Minard's along. It will come in handy for any of dozens of emergencies.

W. N. U. 1789

A Strange People

Russian Exploration Party Makes Interesting Discovery in Siberia
Discovery of a strange race of people who make a habit of smoking from the cradle to the grave, and who live on a steady diet of animal fat during the winter to keep themselves warm is reported by a Russian exploration party.

Known as the Udeke tribe, these people inhabit the vast virgin woodlands of coastal Siberia. They live in crude dwellings built of branches of trees and bark, and they use leaves and skins as covering.

According to the Russian explorers the total number of the tribe is not more than 1,300. As they have no means of recording events, the history of their origin cannot be learned, but it is presumed that they were driven out of Manchuria and Mongolia several hundred years ago.

Although secluded, they are not shut off entirely from the rest of the world. Russians, Burjats and Korean farmers live in the lower valleys of the rivers in which they fish, and contact with these neighbors is indicated by the finding of firearms among the Mongol tribe.

Recipes For This Week

(By Betty Barclay)

HONEY CORN FLAKE MUFFINS

- 1½ cups corn flakes.
- 1½ cups Graham flour.
- 2 cups white flour.
- 1 tablespoonful shortening.
- 2 cups milk.
- ½ cup honey.
- 5 teaspoonful baking powder.

Mix melted shortening with honey. Add to one egg beaten lightly. Then add to the dry ingredients which have been thoroughly mixed. Bake in well-greased muffin tins for thirty minutes. (Will make 22 muffins.)

SILVER STEAK JULIENNE

Cut sirloin steak that is about three-quarters inch thick in three thin squares. Roll in flour, brown both sides lightly in frying pan. Place browned squares in baking dish, sprinkle with salt and pepper lightly. Cover with tomato puree and for each piece of sirloin steak allow one teaspoonful of honey. After covering with tomato puree, add honey. Then place a layer of onion and celery strips over the entire top, cover pan and bake slowly for two hours. Uncover, and bake for about fifteen minutes in good hot oven to properly brown steak. At least four or five strips each of onion and celery should be allowed for each serving.

Fort McMurray Salt Fields

Sir Thomas Tat of the Canadian Salt Company has just completed an examination of the salt fields at Fort McMurray with a view to exploitation.

Winnipeg is the home of upwards of 80 diversified industries which produce over \$152,075,000 worth of goods annually.

"Your wife is talking of going to France this summer. Have you any objections?"

"No, certainly not. Let her talk."

Germany took only a few hours to invade, but is taking many years in evading.

I'm never too tired to sleep now~

Rested nerves make all the difference
Your doctor will tell you how chewing Wrigley's refreshes the mouth and tones you up.

Keep Your Baby Well and Strong

A baby's health and development depend largely upon the care and food it receives. Your infant should be bathed daily and fed regularly. If you cannot nurse your baby try Eagle Brand Milk.

The famous infant food - made from rich cow's milk and granulated sugar - especially for babies. Recommended by physicians everywhere on account of its quality and uniformity.

In this paper from time to time you will find an advertisement of Eagle Brand Milk, a food that has raised more healthy babies than all the prepared infant foods combined. Cut out the advertisement and mail it to The Borden Company, Limited, 100 St. Paul St. West, Montreal and they will send you, free of charge, a very helpful baby book containing authoritative feeding directions and a vast amount of useful information on the care of baby. Also ask for Baby Record, a diary of baby's progress.

Shorn Wireless Station

Report Status Of Installation and Maintenance Of Eight Stations Serving Northwest

A report concerning the eight wireless stations in Alberta and in the far north, operated by the Department of National Defence, Alkali, Hecchoh Islands, Dawson, Mayo, Fort Simpson, Fort Smith, Port Resolution and Edmonton - show the cost of construction of the eight stations to have been \$106,320, and that of annual operation \$28,258.

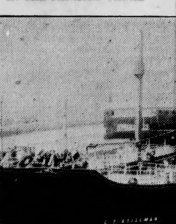

For Sprains and Bruises. There is nothing better for sprains and contusions than Dr. Thomas' Electric Oil. It will reduce the swelling that follows a sprain, will cool the inflamed flesh and draw the pain. It will take the ache out of a bruise by counteracting the inflammation. A trial will convince any who doubt its power.

Southern Alberta Honey

Two and a quarter tons of apiaries frames were delivered to the Rideau Honey Company plant at Taber, Alberta, the other day, shipped by the Alberta Box Company plant at Calgary. The company is preparing for a record season of production.

We are using and destroying our forests four and one-half times faster than we are replenishing them.

IN THE PANAMA CANAL

The world's largest tank ship, the "C. O. Stillman" passing through the locks near Colon. The Stillman is named after Mr. C. O. Stillman, of Toronto, President of Imperial Oil Limited, her owners.

Rush For Land Still Growing

Homesteading In Northern Alberta The Year Has Been Unprecedented

The land rush to Northern Alberta continues apace. It is reported by the Edmonton office of the Canadian National Railways Colonization Department that approximately 1,000 new settlers with capital aggregating more than one million dollars, had gone into the Peace River country and Northern Alberta since the first of the year and up to the first week of April. It is estimated that during April alone nearly 1,500 settlers will settle in these districts. During the period of April 1st to 10th, a total of 312 settlers with capital totalling \$170,000 went to the Peace River District. Among these was one man with \$20,000 capital, another with \$10,000 and another with \$12,000.

During the first quarter of the year 400,000 acres of government land were taken up by homesteaders in the four western provinces, an increase of nearly 100,000 acres over the same period of last year. In the period mentioned, 136 homesteads were taken in Manitoba, 94 in Saskatchewan, 127 in Alberta, and 96 in British Columbia. Homesteading in Northern Alberta has been unprecedented during this period.

Every month so far this year has seen homestead entries at the Edmonton office double over the corresponding months last year. For March alone the total was 226, as compared with 167 in March, 1928.

Last year there were 3,570 homesteads filed on in the Edmonton district, an increase of 147 per cent. over the previous year. There is every reason to believe that the increase noted so far this year will not only be kept up, but may even exceed that of 1928, over 1927. Even if the figures only double, it will mean, that close to 7,000 homesteads will be taken up in this district alone.

Signaller Deserted Post

Member Of Scots Guards Has Been Discharged From Army

George Signwright, the Scots Guards signaller who shattered all British military traditions by deserting his post in front of Buckingham Palace not long ago, will not be a heroic figure for tourist and nurse-maid eyes any more.

He was found guilty by a court-martial of deserting his post, and was given a hard labour in a civil prison for that of 1928, over 1927. Even if he is discharged from the army with ignominy.

Signwright had pleaded that he was sleeping.

"What was that noise over at your home last night?" asked one colored woman of another, "Sounding like a lot of catamounts down broke loose."

"That? Why that was nothing but a germ man from de furniture store collectin' his easy payments."

No Rest With Asthma. Asthma usually attacks at night, the one time when rest is needed most. The nervous debility, the loss of sleep and other evils which must be expected unless relief is secured. Fortunately, Dr. J. D. Kellogg's Asthma Remedy has proved its worth in thousands of years of service. A trial will surely convince you.

Professor's Wife - The war started the 1st of August, 1914, didn't it? Prof. (absent-mindedly) - No, my dear, we were really married in 1912.

SUNDAY SCHOOL LESSON

JUNE 16

JUDAH TAKEN CAPTIVE

Golden Text: "Highly numerous shall be a nation; but sin is a reproach to any people." - Proverbs 14:34.
Lesson: 2 Kings 23:21
Devotional Reading: Psalm 107, 10-16.

Explanations and Comments
The Siege of Jerusalem, verses 1-3. - In the ninth year of Zedekiah's reign, 588 B.C., in the tenth month after the Babylonian capture of the city, which numbered its months from the spring season, the tenth month corresponding to our January, and on the tenth day of the month, Nebuchadnezzar, King of Babylon, came with his army and besieged Jerusalem. "The nation never forgot the month, and the day on which the armies of Chaldees finally invested the city. It was felt as the day of the deepest gloom by the Israelites exiles, Ezek. 24. It has been commemorated as a fast, the Fast of Tethi, ever since in the Jewish Church." - Dean Stanley.

Nebuchadnezzar's army encamped around the city and built forts against it. The forts were probably built on towers from which missiles could be discharged over the city walls. Jerusalem held out for eighteen months. From Jeremiah 34, 7, we learn that a part of Nebuchadnezzar's army was engaged in attacking Lachish and Azekah during this time, and from Jeremiah 37, 21, that the reported approach of an army from Egypt caused a brief raising of the siege. The siege was resumed, and at last famine became so acute in the city that the people were forced to eat the dead. The record in Jeremiah 21:7; Lamentations 4:10-17.

The Fate of Jerusalem, verses 8-10, 12-17. On the seventh day of the fifth month, Nebuchadnezzar, the captain, chief of the executioners, the king's bodyguard to whom such duties belonged, came to complete the destruction of Jerusalem. "The work of destruction was thoroughly done. The gold and silver vessels, and the pillars and vessels of brass of the temple were saved to be carried to Babylon, and then the sacred temple, on which such a passion of love had been lavished, was razed to the ground. The king's palace and every great house in the city were burned, and the city walls were broken down."

Winnipeg Newspaper Union

The Winnipeg Newspaper Union, with 84 points out of a possible 100, the Ottawa Temple Choir was next with 87½ points, and the Peterboro Male Chorus third with 86½ points. The contest was one of the features of the auspices of the Associated Game Clubs of America, in which 76 choirs from the United States and Canada took part, totalling 4,000 voices. In the contest in which the two Canadian choirs scored second and third places, 4 choirs were entered.

Canadian Fish For Britain
Large Supplies Of Fresh Fish To Be Shipped In Fast Refrigerator Steamers

Major Hugh A. Green, former director of fish supplies for the Canadian Expeditionary Forces, is in Ottawa from England conferring with the Government in regard to the purchase by a British firm, of which the Major is now managing director, of large supplies of fresh fish at least 1,000 tons weekly, which will be conveyed to the British Isles by fast, refrigerator steamers plying between the Maritimes and Great Britain.

Government To Treat Sands
Announcement is made that the Dominion Government will build a \$20,000 plant at Edmonton for the extraction of bitumen from tar sands. These sands are contained in vast deposits in the Athabasca district.

Brandon Aero Club
The recently formed Brandon Aero Club is applying for a charter to deal in all forms of aeronautics and public airport operations.

Nervous and Run Down
The Least Noise Would Bother Her

Mrs. B. Burton, Ottawa, Ont., writes: "Three years ago I was so nervous and run down I could not leave the children make a noise it would bother me so."

ALBERTA INSTITUTE OF CO-OPERATION

Lethbridge Olds Vermilion

JUNE 24th - 29th, 1929

Arrangements have been completed for the holding of three separate Institutes of Co-operation in the Province, similar to the one which proved so successful at Edmonton last year.

The meetings will be addressed by speakers who are outstanding authorities on various phases of co-operation in many parts of the continent, and special attention will be paid to the problems in co-operation affecting Alberta farmers. The co-operative marketing of wheat, livestock, dairy products, and poultry and eggs, and the consumers' co-operative movement will be considered and discussed.

Special arrangements are being made for the junior section of the Institutes, and for the instruction and entertainment of the young people who will attend.

Plan to attend the Institute nearest your home, and in order to ensure accommodation, communicate at an early date with the registrars—
